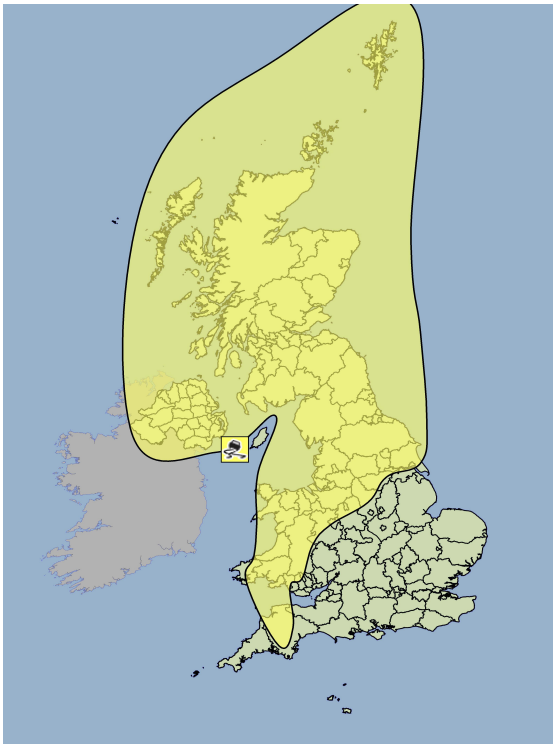
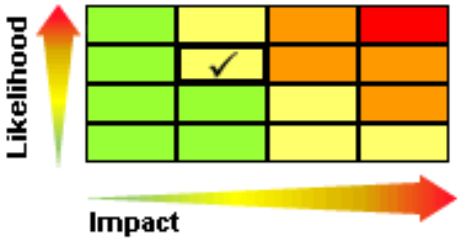
National Severe Weather Warning Service





Chief Forecasters Assessment
Following yesterday's showers, as well as further showers in the north and west overnight, falling temperatures have led to icy stretches forming locally on untreated surfaces.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **04:00 on Sat, 13th Dec 2014** until **11:00 on Sat, 13th Dec 2014**

Icy stretches are likely on untreated surfaces across many northern, western and central parts of the UK this morning.

In addition, sleet and snow showers are continuing to affect northern and western parts of Scotland as well as parts of Northern Ireland. These may extend further inland into the Central Belt of Scotland for a time this morning. As a result, some local slight accumulations of snow are likely in these areas, contributing to the icy conditions.

The public should be aware that this could lead to difficult driving conditions.

This is an update to the warning issued yesterday morning, to highlight continuation of wintry showers in the northwest this morning.
